Problem Statement

Problem Context

Students face increasing academic pressure, burnout, anxiety, and emotional stress, while early warning signs often go unnoticed.

Many hesitate to seek help due to stigma and lack of awareness.

Institutions struggle to identify at-risk students early while maintaining privacy and ethical intervention.

Challenge

Design and develop a proactive student well-being platform that can:

- Identify early patterns of emotional or behavioral distress
- Enable timely and supportive interventions
- Promote emotional awareness and self-reflection among students
- Ensure privacy-first, ethical, and non-invasive monitoring

Objective

The solution should focus on preventive care and well-being support, rather than clinical diagnosis or labeling students.

It should act as an early support system that helps institutions and students recognize concerns early and encourage timely help-seeking behavior.

Our Solutions

Context-driven Virtual AI Assistant

A customisable ai chatbot acts as a personal AI wellness guide.

It provides empathetic conversations, emotional support, and helpful suggestions to guide students through academic and personal stress.

Community Hub

A social dashboard for anonymous powered campus social ecosystem where students can interact, share thoughts support each other and express emotional maturity .

Orb Sanctuary

The home of your new virtual pet, deck shows insights of the pet such as mood, energy level and missions. And other relevant data in a simplified UI deck.

Our Solutions

User Analysis & Insights

Provides a detailed analysis of the users attendance, submission rate and streak.

AI analyses Assistant chatbot data and missions data to provide structured numbers in a fast and simple manner.

Orb Island

A gamified visual world that reflects the user's emotional state and progress.

It transforms wellness tracking into an interactive and immersive experience, increasing engagement.

Orbit Pulse

A AI powered institutional intelligence dashboard designed for universities and counsellors. It analyzes data of the Orb pets behaviour and emotional trends from the Orbit ecosystem to generate monthly wellness reports.

Key Advantages

Invisible Support System

Orbit embeds wellbeing support into tools students already want to use, reducing stigma and encouraging consistent engagement without requiring students to actively seek help.

Real-Time Institutional Insight

Orbit gives universities live cohort-level wellbeing trends and academic pressure signals, enabling earlier and more effective interventions across courses and departments.

Personalised Student Experience

With AI companionship, adaptive missions, and anonymous community spaces, Orbit creates a highly personalised environment that keeps students connected, supported, and engaged daily.

TECH STACK

Frontend

- Core UI: React 19, React Router 7 (Navigation).
- Frameworks & Libraries: React.js for building the dynamic user interface and state management..
- Styling & Design: Tailwind CSS 4, Framer Motion (animations), and Lucide React (icons) for UI/UX design.

Backend

- Languages: TypeScript (Node.js runtime).
- API & Frameworks: Supabase (Database & Auth) and Express.js (Node.js server operations).
- AI & LLM Integration: Google Gemini API (Nova AI) and Web Speech API for transcription and TTS.

Other Libraries and tools

- TypeScript, Vite 6 (Build Tool)
- Cloud Run (Hosting), .env Management
- tsc (TypeScript Compiler)

Impact & Vision

Student Impact

Orbit reduces stigma by making support feel like part of daily usage rather than a mental health tool.

Students stay lightly engaged through companionship, micro-missions, and peer interaction, preventing isolation from becoming complete withdrawal.

Institutional Impact

Universities gain real-time, cohort-level insight into student wellbeing trends instead of relying on delayed signals like dropout rates or counselling uptake.

This enables earlier, system-level interventions across courses and departments.

Structural Insight

Orbit aims to become a unified student companion connecting academic, social, and wellbeing experiences across institutions.

Orbit identifies stress patterns across courses and cohorts, helping universities improve systemic issues rather than target individuals.

Thank You
